

## **Assembly**

[Warminster, PA](#)

**Job Type**

Full-time

**Description**

Assembly technician's responsibilities include assembling mechanical and rotating equipment such as Diaphragm Compressors, Pressure Vessels, Pumps, and Magnetic Drives.

***We offer a set career path for this role as you can grow into multiple assembly levels and eventually become a Team Lead and Manager!***

### **Responsibilities:**

- Reading engineering drawings and associated bills of materials.
- Capable of bending and routing stainless steel tube lines primarily using but not limited to compression fittings, pipe threaded fittings and cone and threaded fittings.
- Able to thread and bend carbon and stainless-steel pipe (sch-40, 80, 160)
- Ensuring the product is assembled by the work file issued by engineering.
- Communicate with Assembly Leads and Supervisors in all aspects of the product assembly.
- Cleaning and pre-washing mechanical parts.
- Follow established safety procedures as outlined in the employee manual and updated guidelines communicated by the safety committee.
- Wear appropriate protective and breathing apparatus when dealing with solvents or cleaning agents.
- Maintain quality standards of the department as it relates to ISO 9001 Quality Manual
- Ensure the product is assembled in accordance with the work file issued by the engineering
- Follow written and verbal communications given by the supervisor.

### **Requirements**

- HSD or GED required
- 1 to 2 years experience working in automotive, mechanical, or manufacturing fields.
- Experience working with hand and power tools.
- Experience reading blueprints is a plus but not required.
- Experience working with rotating equipment is a plus but not required.
- Must be able to lift, push, and pull up to 60 LBS
